Mc CLEOD GAUGE (Vacustat) complete with Stand and Distilled Mercury

This is extensively used where a portable and easily setup guage is required.

Working instructions general :

The instrument vent fitted on stand is rotatable on its axis, When the big bulb is at the top side the position of the gauge is vertical. On rotation at 90° the big bulb comes to right hand side and will be called in horizontal position.

Mercury filled :

Through the glass tube pour mercury through barometer funnel after tilting the gauge in such a way that the whole of the mercury is accomodated in the bi reservoir bulb hereinafter called 'R'. Generally, the mercury is kept in the 'R'.

Connection to vacuum system :

There is connected vacuum system to the glass tube at the back.

Working :

Start the vacuum pump while the gauge is in the horizontal position and the mercury is 'R'. When it is desired to measure the degree of vacuum rotate the gauge to the vertical position, the mercury will flow into the left hand glass tube again the scale which will directly show pressure of vacuum inside the system in Hg mm. The instrument gives direct reading of vacuum instantaneously. The mercury does not come in contact with rubber tubing so it is not polluted. No moving parts hence no wear and tear.

Precautions :

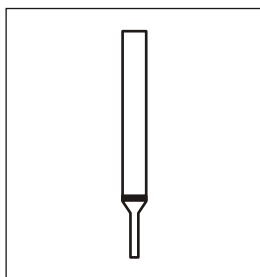

After taking the vacuum reading rotate the gauge to its horizontal position so that whole of the mercury comes to 'R'. The gauge is brought to vertical position when vacuum is to be observed.

STERISTOPPERS, GERMANY

STERISTOPPERS are manufactured by M/. Heinz Herenz, Hamburg, Germany who have 45 years of experience and specialities is in laboratory consumables and hospital supplies. They are reputed for their own innovative designs and development activity having a number of patents and copyrights in their own name.

STERISTOPPERS are generally used as sealing for Microbiological and Tissue culture samples in test tubes, conical flasks, solution bottles. They replace traditional aluminium foils or cotton plugs which normally take considerable time to prepare. Besides, such sealings may not be full - proof from the point of view of contamination. Therefore, STERISTOPPERS answer all the problems associated with traditional sealings.

Some of the unique features of STERISTOPPERS are:

- Easy and immediate fixing.
- Active breathing for micro-organisms and bacteria as they are air permeable.

- No contamination from outside.
- A special manufacturing process makes them DRY sterilizable upto 200°C.
- Reusable after sterilization.
- Tight fitting to ensure airtight and dustfree working.
- Time and money saving.
- Also used for covering sharp pointed needles and instruments - specially for sterile sealing in pouches.

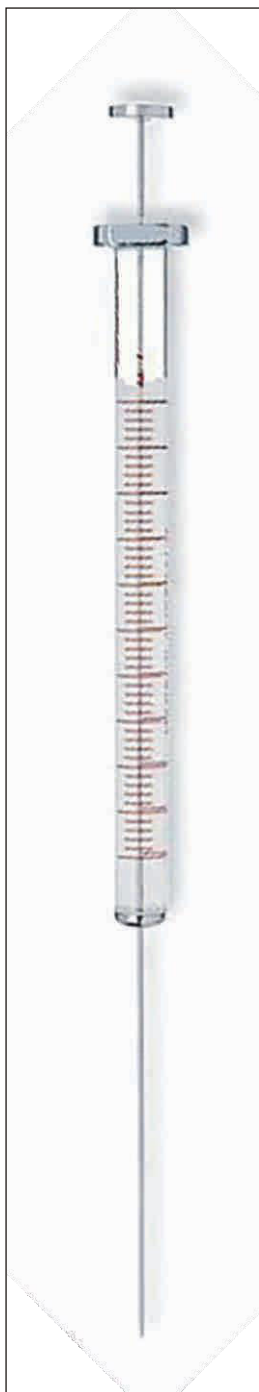

In addition to the sizes mentioned in this price list, there are many other sizes of STERISTOPPERS available which are suitable for different applications involving various kind of glassware and for other laboratory usage.

In order to select the correct size of STERISTOPPERS the internal diameter of the glassware would be relevant. Therefore, for sizes other than those mentioned in this price list, We request you to inform us the internal diameter of the neck of the glasswares in which the STERISTOPPERS are required to be fitted so that a proper size selection can be made by us before making our offer.
